

Abstract of the Disclosure

5 A wrap for covering and protecting an intravenous site on
a hand of a patient having an entertainment component such as a
doll or puppet for children. The wrap comprises doll arm
holes, a thumb hole and a plurality of fastening strips
strategically located on both sides of the wrap for securing
the wrap around the entertainment device and the intravenous
site on the patient's hand. An alternate embodiment comprises
a wrap with an entertainment device for protecting an
10 intravenous site on the hand of a baby. The wrap may also be
used on a foot and/or at the area of the antecubital fossa
(bend of the arm) or the forearm by disregarding the finger
placement holes.
